

## Development of a project-risk analysis system

### Presentation

This class module is organized around real case studies of project risk assessments/analyses conducted in partnership with operators, development institutions, various NGOs, private companies, etc. that conduct activities internationally and more particularly in Africa, the Middle East, Asia, and Latin America. These "Project Risk" analyses are based on an original approach to the risks and opportunities that projects present for the beneficiary populations (impact on living conditions, territory, etc.) and the initiating organization (for example, financial risk, or image-related risk in the context of a CSR initiative).

Being able to position oneself as an expert to respond to an offer of service involving risk analysis and strategic consulting; Having a good command of the key stages of project risk analysis, namely: identification, assessment, and analysis; being able to write a summary document including method, analysis, rating, recommendations, and risk mitigation scenario.

### In brief

**Number of hours** : 18.0

**Year** : Fifth year

**Validation** : Final written examination
