

Introduction to general sociology

Presentation

Sociology is concerned with the scientific study of social phenomena. It is a plural discipline, both in terms of its objects and of its theoretical traditions and methods of investigation. The analytical tools and the very conception of society and individuals are the subject of intense debates. This course aims to shed some light on this diversity, while highlight the scientific basis of all sociological research activities. Knowledge must, by no means, be compartmentalized into two types (as is often done in sociology instruction): theory (authors and paradigms) and methods (techniques and surveys). Thus, conceptual issues and empirical data will be examined jointly. The course comprises two parts (1- A scientific analysis of the social world; 2- Diversity of investigations and in the questions raised by researchers). More specifically, a number of case studies built on strong theoretical and methodological frameworks will be presented (among the issues analysed are: suicide; cultural practices; sex and gender; discrimination).

Recommended Prerequisite(s)

The course is intended for a diverse audience: Erasmus students and students in the standard program. This diversity is obviously taken into account in the pedagogical design of the course. All students will be able to understand the empirical, methodological and conceptual issues analysed in this introduction to general sociology.

In brief

ECTS credits : 2.0

Number of hours : 36.0

Teaching term : Six-monthly

Teaching activity : Lecture course

Year : First year

Validation : Final written examination

Formule pédagogique

Regular attendance is essential for understanding and internalizing the course content. It is the first step to achieving exam success. The teacher places emphasis on the fundamental references and key concepts. Each case study is examined at length and a list of suggested readings for a more in-depth understanding will be provided. At each session, students are given time to ask questions.
