

Theories of organizational communication

Presentation

The class begins with an introductory section in which we will examine the development of the field of organizational communication as a field of research, using a genealogical approach to the American and French cases. An analysis of the fields of application of research is proposed. We will then focus on the « poor relation » of communication practices, namely, internal communication, a practice that is essential in terms of image and reputation in the era of social networks. Modeling of strategic internal communication practices will be proposed, based on a theoretical reflection and analysis of the strategies of some fifty companies. This modeling involves five dimensions: relational, integration-related, maieutic, heritage-related and logistic. Each of these dimensions will be examined in relation to observable practices. This modeling will enable us to propose a diagnostic method as well as a heuristic tool for developing strategic scenarios based on frequent situations. These tools will then be compared with actual practices in the field.

In brief

ECTS credits : 2.0

Number of hours : 18.0

Teaching term : Six-monthly

Teaching activity : Lecture course

Year : Fourth year

Validation : Continuous assessment
